

One safety app for everyone, everywhere.

Punch Alert is the only way to report, manage and communicate en mass in one mobile-centric platform.

Report an Emergency

Punch Alert's mobile app turns any iOS or Android device into a mobile panic alarm. Employees and visitors are able to use their phones to report emergencies or suspicious situations to preselected emergency responders.

Collect & Share Information

Any user can submit information to emergency responders in the form of text notes, images, video or audio recordings. Punch Alert allows responders to easily and efficiently crowd source this information, and even redistribute warnings and announcements to everyone on campus as one mass notification.

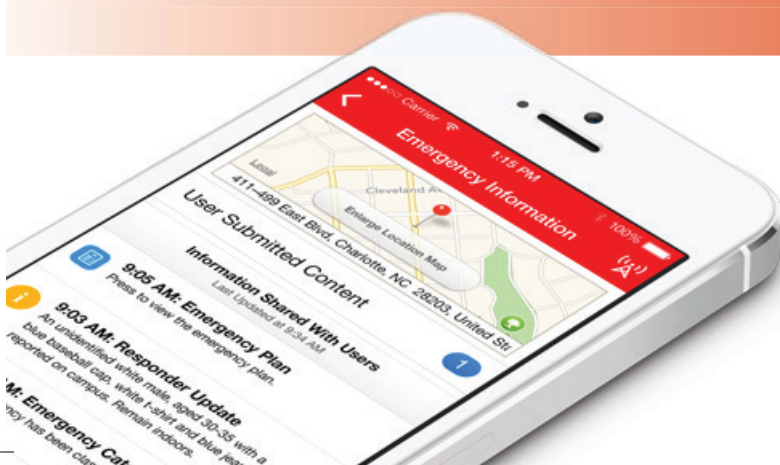

Management & Resolution

Instantly after an emergency is reported, responders receive an email, text message, and automated phone call with the name and location of the person who reported the emergency. Responders can screen emergencies as they come in, release them to specific users, distribute emergency plans, share content and updates, as well as resolve the emergency—all from their mobile device.

Accurate Location Tracking During Emergencies

All campuses using Punch Alert are geofenced to ensure that only those on-site are tracked in the event of an emergency. Punch leverages GPS, Cell, and Wifi to triangulate location within the geofence of the campus. Punch also offers and installs state of the art iBeacons which allow you to accurately determine the indoor location of individuals during an emergency.

One App

to Make the World a Safer Place

Punch Alert Web Console & Support

Punch Alert allows location managers to immediately disseminate emergency warnings & alerts as well as non-emergency announcements to employees, visitors, students and patrons. The web console is a dashboard for your administrative staff and emergency responders. Administrators can manage users, geofence campus locations, setup iBeacons, curate emergency plans, and customize emergency notifications and alerts. Responders can also use the web console to manage active emergencies, review resolved incidents, and run tests or drills. Also use Punch Alert on a regular basis for your announcements with some powerful new in-app features: request a yes/no response, recipients' location, and comments. Plus, you can extend your public safety network to your visitors at no additional cost.

PAL Community

Keep safe wherever you go

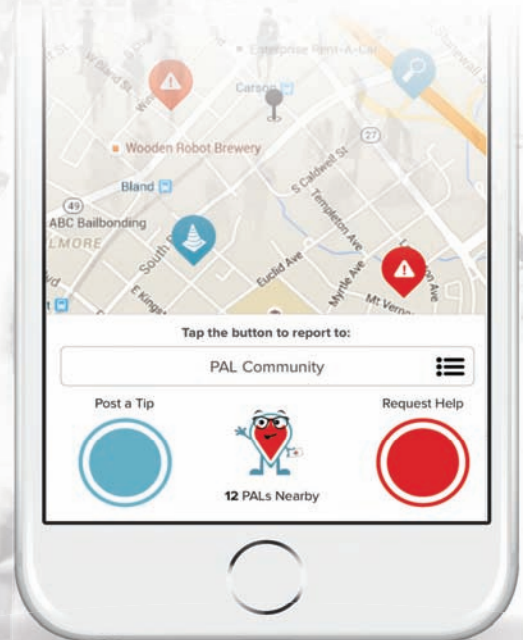

As a Pal, you can quickly connect to an official responder using 911 or request help from Pal members around you by pressing the red button.

Know what's going on in your area

You can press the blue button to post a tip about a safety concern in your current area. You and other Pals will be able to view the tip on the map keeping everyone in the know.

Be the change you want to see in the world

As a Pal, your "good intentions" will help the movement to stop those with "bad intentions" and make your community safer to all.
